# Highlights & Agenda

## Introduction & Highlights

The CLIMAFIX Summit 2022 is a two day event to be held on November 25 & 26 at Chennai.

Organized by Energy Alternatives India (EAI) along with the Energy Consortium - IIT Madras, the event will comprise about 200 climate tech startups & about 100 investors, along with corporates and entrepreneurs. We expect about a total of 500 delegates at the summit.

The objective of the summit is to provide a platform for all key climate innovation & startup stakeholders to come together and chart out a roadmap to significantly accelerate the ecosystem in itself, and accelerate adoption of the ecosystem innovations & solutions by the industry.

### Structure of the CLIMAFIX Summit 2022

The Summit is organized around ten decarbonization tracks:

- Renewable Energy
- Energy Efficiency
- Energy Storage
- Waste Management
- Low Carbon Mobility
- Digital for Decarbonization
- Low Carbon Agri & Food
- Low Carbon Materials
- Water Sustainability
- GHG Management

For each of the ten tracks, the summit will comprise two types of sessions: *a panel discussion (Insights session) and a Snapshot session (Startup presentations)*.

There will thus be a total of 20 sessions held over two days.

Each of the 20 sessions will be anchored by an investor and the rest of the participants will be startups.

The objective of the panel discussion is to have startup insights and best practices shared with the audience. To this end, we will have successful startups, most of them already funded, participate in the discussion. Each panel discussion will be moderated by a venture capital professional and the panel will comprise successful startups.

The Snapshot sessions are for early stage startups to get visibility and guidance. Each snapshot session will be captained by a venture capital professional who will also provide the context and perspectives, followed by 5-7 brief presentations by early stage startups.
